

BUILD FORTIFIED

STRENGTHEN YOUR ROOF AND BE READY

3 WAYS FORTIFIED ROOF OFFERS EXTRA PROTECTION

Stronger Connections - Your Roofing Contractor will use more – and stronger – nails in an enhanced pattern proven to help keep the roof attached to your house, even in severe weather.

Sealed Seams - In extreme winds, even the best roof may lose shingles. To prevent water from pouring into your home, your Roofing Contractor will seal the gaps between your roof's decking.

Reinforced Edges - Studies show roof edges are especially vulnerable to wind damage. A FORTIFIED Roofing Contractor uses materials specifically designed to lock them down.

3 STEPS TO A FORTIFIED ROOF

If You Want Peace of Mind When the Next Storm Hits, 3 Simple Steps Can Lower Your Risk of Storm Damage And Lower Your Insurance Costs, Too!

- Choose a FORTIFIED Roof Package

Science

Every year, severe weather brings powerful winds, torrential rain, hail and even tornadoes. Your contractor can help you defend your home with a FORTIFIED Roof package, developed using cutting-edge science to protect against extreme weather. Based on two decades of research by the Insurance Institute for Business & Home Safety, the FORTIFIED building standards define a series of upgrades that go beyond typical building codes to make homes stronger and better able to guard against severe weather. Additionally, having a FORTIFIED Roof may also help you lower the cost of homeowners insurance.
